

IN THE CLAIMS:

Sub E1
1. (Currently Amended) A process for monitoring the consumptions of a plurality of franking machines through a public communication network, at least one of the franking machines being electrically isolated from the public communications network and at least one of the franking machines being in communication with the public communications network, the process comprising the steps of:

first establishing a link with a management server through the public communications network, in accordance with a protocol of communication, via at least one supervision terminal from which the ~~isolated plurality of franking machine machines~~ is independent; and

subsequently proceeding with an exchange of data between the supervision terminal and the management server during which a user (1) acquires at the supervision terminal a current invoicing index indicative of the isolated franking machine and (2) receives a code of authorization to frank in order to validate the subsequent frankings of the isolated franking machine, wherein said step of data exchange further comprises:

displaying, at the supervision terminal (1) a list of the plurality of franking machines, and (2) for each one of the plurality of franking machines, a last invoicing index validated by the management server.

2. (Previously Amended) The process of claim 1, wherein the protocol of communication used for establishing a link with the management server is a Videotex protocol, such as teletel protocol.

3. (Previously Amended) The process of claim 1, wherein the protocol of communication used for establishing a link with the management server is a protocol of TCP/IP type.

AMENDMENT UNDER 37 C.F.R. § 1.116
APPLICATION NO. 09/392,585
ATTORNEY DOCKET NO. Q55716

Sub E 7
4. (Original) The process of claim 1, wherein said step of data exchange further comprises: the user entering into the supervision terminal an identifier including at least one of a password and a personal identification number.

5. (Canceled)

6. (Previously Amended) The process of claim 1, wherein said step of data exchange further comprises displaying, at the supervision terminal, one of a selectable plurality of tables and statistics in graph form relating to a list of printing heads of the plurality of franking machines.

7. (Previously Amended) The process of claim 1, wherein the code of authorization to frank comprises information indicative of one of (1) an authorized maximum amount of credit, (2) an authorized maximum amount of consumption, and (3) a period of franking.

8. (Previously Amended) The process of claim 1, wherein the code of authorization to frank is obtained by calculation from one of the current invoicing index and a serial number of a printing head.

9. (Previously Amended) The process of claim 1, wherein the code of authorization to frank is obtained by calculation from a current date.

10. (Previously Amended) The process of claim 1, wherein the code of authorization to frank is obtained by calculation from information indicative of one of (1) a maximum amount of credit, (2) a maximum amount of authorized consumption, and (3) an authorized period of franking.

AMENDMENT UNDER 37 C.F.R. § 1.116
APPLICATION NO. 09/392,585
ATTORNEY DOCKET NO. Q55716

5-27 E 7
11. (Previously Amended) The process of claim 1, wherein the protocol of communication used for establishing a link with the management server is a protocol of telephonic communication of a vocal synthesis type.

X
12. (Canceled)

13. (New) The process of claim 1, wherein said steps of data exchange further comprises entering, at the supervision terminal, a current invoicing index indicative of the isolated franking machine and receiving, from the management server, a code of authorization to frank in order to validate the subsequent franking of the isolated franking machine.
